## DETAILED ACTION

### *Claims*

1. Claims 1-15 are pending.

### *Information Disclosure Statement*

2. The information disclosure statement (IDS) submitted on 15 December 2003 was considered by the examiner.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abel (US 5,582,744).

Abel discloses, in Figure 2 and at col. 4, filtration pipes having supports **46** bearing helically twisted wire bristles **44** (col. 4, lines 9-29).

The examiner deems bristles to be fibers.

Art Unit: 1772

Abel fails to teach carbon fiber bristles.

It would have been obvious to one having ordinary skill in the art at the time of the invention to employ carbon bristles in the filtration pipes of Abel in order to make the filters lightweight.

Carbon fibers are well known to be lightweight.

It is deemed desirable to make filtration pipes lightweight, so that they can be transported easily.

The use of bristles whose lengths cause them to brush against the sides of the pipes is deemed an obvious way to maximize contact between the bristles and the liquid being filtered.

The use of textured supports 44 is deemed an obvious way to create turbulence during filtering.

#### ***Citation as of Interest***

6. The Graebeldinger abstract (DE 10260496A1) teaches the use of carbon fibers in filters located inside pipes.
7. JP 03119188A is cited as of interest for showing carbon fiber bundles inside thermoplastic tubes.
